ColdStoreERP

A Complete Cold Store & Cold Chain Management System by TondeSoft Ltd

ColdStoreERP is an all-in-one, cloud-ready management platform built for cold stores, warehouses, and cold-chain businesses that need tight control over stock, temperature, and finances. From sales and procurement to batch tracking, temperature monitoring, and multi-branch accounting, every part of the operation is brought together on a single, secure platform. The sections below outline each module available in the system and the value it brings to your business.

Sales & Trading

Dashboard	A real-time overview of sales, stock levels, temperature status, and outstanding invoices, giving management instant visibility into how the cold store is performing at any moment.
Point of Sale	A fast checkout and sales terminal for walk-in and counter trading, capturing transactions accurately and updating stock and accounts automatically.
Sales & Invoices	Generates and tracks customer invoices from quotation through to payment, keeping sales records organised and easy to follow up on.
Purchases	Manages purchase orders and stock intake from suppliers, ensuring incoming goods are recorded accurately and costed correctly.
Customers	Maintains a database of customer accounts, order history, and outstanding balances, supporting stronger trading relationships and credit control.
Suppliers	Keeps a directory of suppliers with contact details, pricing, and purchase history, streamlining procurement and vendor management.

Cold Chain & Inventory

Products	A central catalogue of all stocked products, including pricing, units of measure, and storage requirements, forming the foundation of inventory control.
Batches & Expiry	Tracks stock by batch number and expiry date, enabling first-expiry-first-out handling and reducing losses from spoilage or expired goods.
Stock Transfers	Manages the movement of stock between cold rooms, branches, or storage locations, keeping inventory records accurate everywhere it is held.
Cold Rooms	Maps and manages individual cold rooms and storage units, including capacity and product allocation, for organised warehouse operations.

Temperature Logs	Records temperature readings across cold rooms over time, supporting food-safety compliance and early detection of equipment or storage issues.

Accounting & Finance

Chart of Accounts	Defines the structured list of accounts used to categorise every financial transaction, forming the backbone of accurate bookkeeping.
General Ledger	Records all financial transactions in one central ledger, giving a complete and auditable view of the business's financial activity.
Banking	Manages bank accounts, deposits, and withdrawals, and reconciles transactions against bank statements to keep the books accurate.
Expenses	Tracks operational expenses such as electricity, maintenance, and supplies, categorised for clear cost analysis and budgeting.
Payroll	Automates staff salary calculations, deductions, and payment processing, reducing manual payroll administration.
Fixed Assets	Tracks cold store equipment, refrigeration units, vehicles, and property, including depreciation and maintenance schedules.

Management

Reports	Generates detailed sales, inventory, financial, and temperature-compliance reports to support informed, data-driven decisions.
Branches	Manages multiple cold store locations from a single system, with centralised oversight and branch-level reporting.
ERP Users	Controls system access with role-based permissions, ensuring staff only see and do what they are authorised to.
Company Setup	Configures core business settings such as branch details, tax rates, currency, and other system-wide defaults.

Why ColdStoreERP? Every module is designed to work together, so information entered once — a stock intake, a temperature reading, a sale — flows seamlessly across the system. The result is fewer losses from spoilage, tighter compliance, and more time for management to focus on growing the business rather than chasing paperwork.
