Overview

ElearningERP is TondeSoft Ltd's e-learning management ERP system, designed to bring every part of running a school or training institution — academics, admissions, communication, payments, staffing, and accounting — into one connected platform. It replaces fragmented registers, spreadsheets, and manual processes with a single system of record that gives leadership real-time visibility and gives administrative teams the tools to work faster and more accurately. The sections below outline the core modules that make up ElearningERP.

Core Modules & Features

01 Dashboard
A real-time overview of the institution's academic and financial health — enrolments, attendance, revenue, and outstanding fees in one view. Administrators can spot trends and issues instantly instead of compiling data from multiple registers.

02 Courses
A central catalogue for creating, organising, and managing every course offered by the institution, including syllabi, class levels, and instructors. It gives academic staff full control over course structure and availability.

03 Schedule
A timetabling module for planning classes, exams, and academic events. It helps prevent scheduling conflicts and keeps students, teachers, and parents aligned on what's happening and when.

04 Students
A complete student information system holding profiles, academic history, guardian details, and performance records. Staff can manage the full student lifecycle from admission to graduation in one place.

05 Enrollments
Streamlines the process of registering students into courses or classes, tracking capacity, and managing waitlists. It removes the manual paperwork typically involved in intake periods.

06 Fees
Manages fee structures, billing schedules, and outstanding balances per student or class. Administrators can generate invoices and track who owes what without manual spreadsheets.

07 Payments
Records and reconciles payments made by students or guardians against outstanding fees, giving finance teams an accurate, up-to-date picture of collections and arrears.

08 Mobile Money
Integrates directly with mobile money platforms, allowing parents and students to pay fees conveniently from their phones, with payments reflected automatically in the system.

09 Bulk SMS
Sends mass text messages to students, parents, or staff for announcements, fee reminders, exam schedules, or emergency notices, ensuring important information reaches everyone quickly.

10 WhatsApp
Enables communication with students, parents, and staff over WhatsApp directly from the platform, offering a familiar, high-open-rate channel for reminders, updates, and support.

11 Certificates

Automates the generation and issuance of certificates, transcripts, and other academic credentials once a student meets the required criteria, reducing administrative turnaround time.

12 Staff

A staff management module covering teacher and employee profiles, roles, qualifications, and assignments, giving HR and academic leadership a single source of truth for personnel.

13 Payroll

Handles staff salary computation, deductions, and payment processing, ensuring teachers and employees are paid accurately and on time each pay period.

14 Accounting

A general accounting workspace for recording and managing the institution's day-to-day financial transactions, tying academic operations to overall financial management.

15 Chart of Accounts

Provides a structured listing of all financial accounts used by the institution, forming the backbone for consistent, organised financial reporting.

16 Journal Entries

Allows finance staff to record detailed accounting transactions directly into the ledger, supporting accurate and auditable financial records.

17 Trial Balance

Automatically compiles all ledger balances to verify that total debits equal total credits, helping finance teams catch discrepancies before producing formal financial statements.

18 Income Statement

Generates a clear summary of the institution's revenues and expenses over a given period, giving leadership visibility into overall profitability and financial performance.

19 Balance Sheet

Produces a snapshot of the institution's assets, liabilities, and equity at a point in time, supporting financial planning and reporting to stakeholders or regulators.

20 Reports

A reporting suite covering academic, financial, and operational data, letting administrators generate the insights they need for decision-making, accreditation, or board reporting.

21 Users & Roles

Manages system access through configurable user accounts and role-based permissions, ensuring staff, teachers, and administrators only see and do what their role allows.

For a live demonstration of ElearningERP or a tailored pricing proposal for your organisation, please reach out to TondeSoft Ltd on 0539228215 or WhatsApp 0275498774.
